## Simulating the creation of WI Assembly maps without election data

## Matt Petering, PhD <br> July 17, 2023 <br> Methods

District Solutions LLC's FastMap redistricting algorithm was used to create 1000 legally acceptable maps of Wisconsin's 99 assembly districts. Each map satisfied legal requirements for contiguity, population deviation (+/-1\%), and the Voting Rights Act ( 6 districts with $>50 \%$ Black VAP and 2 districts with $>50 \%$ Hispanic VAP). Also, each map had excellent compactness (i.e., nice district shapes).

No election data were used in the mapmaking process. After making the maps, we investigated their partisan performance.

## Results

Expected number of assembly districts won by Democrats
Average: 42.5; Minimum: 40.5; Maximum: 45.4

| Expected \# Dem Seats <br> (rounded) | \# Maps |
| :---: | :---: |
| $0-40$ | 0 |
| 41 | 73 |
| 42 | 409 |
| 43 | 444 |
| 44 | 72 |
| 45 | 2 |
| $46-99$ | 0 |

Likelihood the Democrats will win a seat majority in the Wisconsin Assembly
Average: $0.24 \%$ chance; Minimum: $0.009 \%$ chance; Maximum: $5.2 \%$ chance

| Dem Seat Majority <br> Likelihood (\%) | \# Maps |
| :---: | :---: |
| $0 \%$ to $.009 \%$ | 0 |
| $.009 \%$ to $.01 \%$ | 1 |
| $.01 \%$ to $.03 \%$ | 32 |
| $.03 \%$ to $.1 \%$ | 268 |
| $.1 \%$ to $.3 \%$ | 445 |
| $.3 \%$ to $1 \%$ | 238 |
| $1 \%$ to $3 \%$ | 15 |
| $3 \%$ to $5.3 \%$ | 1 |
| $5.3 \%$ to $100 \%$ | 0 |

District Solutions LLC has used election data and the FastMap algorithm to make proportional maps that are legally acceptable and highly compact. For the dataset used above, a proportional map gives Democrats (Republicans) 50 (49) expected seats and a $51 \%$ ( $49 \%$ ) chance of winning a seat majority.
